

ALIYI MARKET

Global Online Marketplace

PROJECT DOCUMENTATION — VERSION 1.0

Project Owner: Aliyi Abraham

Platform: Android / Online Marketplace

Purpose: A marketplace application for discovering products, buying, selling and managing orders.

1. Project Overview

ALIYI MARKET is a planned global online marketplace. The starter version provides the foundation for a larger application that can later include secure accounts, sellers, products, payments, orders, delivery and administration.

2. Main Goals

- Help customers discover and search products.
- Provide registration, login and user profiles.
- Give sellers tools to list and manage products.
- Provide cart and order management.
- Add secure payment services in the production phase.
- Prepare the platform for international expansion.

3. Main Features

Feature	Purpose
Home	Marketplace home screen with search and categories.
Search	Find products by name or keyword.
Categories	Organize products for easier browsing.
Login / Register	Account access for users and sellers.
Product Details	Show product information and price.
Cart	Collect products before checkout.
Orders	View and manage customer orders.
Seller Dashboard	Manage seller products and sales.
Payment	Planned secure payment integration.
Profile	Manage user account information.
Admin Dashboard	Planned marketplace administration tools.

4. Development Roadmap

Phase 1: Android project setup, home screen and navigation.

Phase 2: Registration, login and profiles.

Phase 3: Product database, categories, search and product details.

Phase 4: Seller accounts, product upload, stock and sales management.

Phase 5: Cart, checkout, payments and order tracking.

Phase 6: Admin dashboard, moderation, reports and controls.

Phase 7: Testing, security checks, bug fixing and Google Play preparation.

5. Technical Components

- Android application frontend
- Cloud/backend service
- Secure database
- Authentication
- Payment provider(s)
- Product image/file storage
- Administration system

6. Security

Production versions should use secure authentication, encrypted connections, server-side validation, access controls and established payment providers. Sensitive payment information should not be stored insecurely.

7. Future Expansion

The platform can later support multiple languages, currencies, international sellers, delivery partners, seller verification, reviews, notifications, promotions and analytics.

8. Project Identity

Brand: ALIYI MARKET

Tagline: Global Online Marketplace

Vision: Build a practical digital marketplace connecting buyers and sellers online.

Mission: Make online buying and selling easier through useful marketplace tools.

Prepared for the ALIYI MARKET project.
